Ref No. _____	Date _____	
To The Deputy Commissioner East Khasi Hills District, Shillong		
Subject: Land acquisition by Govt. of Shillong from the Magnetic Observatory Shillong for the purpose of improvement /widening of 2 lane of NH-40 between shilling to Dawki		
Ref: Notification no: 14/5(17)2018/11 and L.14/5(17)2018/12 dated 4th Jan. 2019		
Dear Sir,		
Indian Institute of Geomagnetism, is a premier Research Institute, under the Department of Science & Technology, Govt. of India. The Institute had established a Magnetic Observatory at Shillong, Wilton Hall Estate, Upper Shillong in 1973. The prime objective of setting up the magnetic observatory at Shillong is to monitor the geomagnetic field variations in the North East region of the country.		
It was in January, 2016 that Indian Institute of Geomagnetism (IIG) has taken a new initiative by upgrading the Magnetic Observatory to the Shillong Geophysical Research Centre (SGRC) as one of its Regional Research Centre. The focus of research at this newly established centre at Shillong would be on deciphering the pre and co-seismic signatures in various atmospheric regions over the North-East India using a variety of observational techniques.		
It may kindly be noted that, various sensitive geophysical instruments such as Fluxgate Magnetometer, Induction coil magnetometer, Overhauser Magnetometer, Seismometer, Radon monitoring system, GPS receivers and MT instruments are installed at this Centre. The instruments deployed at this Centre are intended to operate over a long term period to achieve the desired scientific objectives. One of its main task is to monitor the geomagnetic variations. The choice of the site for the observatory is of utmost importance. It is important that the observatory site be magnetically representative of its region, for both secular and short term variations. Moreover, instruments like Seismometer and MT instruments are continuously recording ground vibrations and requires minimum disturbance (free from vehicular movement) to record the smallest signatures of seismic activities. Similarly, other instruments like radon monitoring systems, GPS, AEFM etc. also require noise free environment to function properly. Considering the above reasons, the regional centre was established at the present site which is free from electromagnetic noise caused by cultural activities and vehicular movement so as to yield quality data for geophysical research.		
Recently, it is learnt that Government of Meghalaya has notified for the land acquisition to construct 2-lane / 4-lane road from Shillong to Dawki, which also passes through our campus. It

is understood from the project plan that the road will pass through the back side of the campus of our Centre.

It is also to be mentioned here that the instruments room, namely absolute room, Induction coil Magnetometer sensor room, Variometer room (Fluxgate magnetometer) and Overhauser magnetometer, seismic vault are lying very close to the backside of the campus. Therefore, construction of the proposed road and subsequent construction activities and vehicle movements or any other developmental activities near these rooms will definitely corrupt and contaminate the data recorded from these instruments and will further add the artificial noises to the instruments. This contaminated data would adversely affect our scientific research.

In this regard, we **have strong objection for your proposed 2-lane / 4-lane road from Shillong to Dawki passing through our campus at SGRC, Shillong.**

It is therefore, requested, to kindly replan, shift / divert the alignment of proposed road farther away from the SGRC campus keeping in mind the importance of scientific research activities and the usefulness of scientific data obtained from SGRC dedicated to the North East region in particular and scientific communities in general.

Thanking you,

Yours faithfully,

(P. Kamala)
